

ARCHIWARE

The gargantuan increase in data volume, increasingly stringent security and legal standards, and an ever more pressing need to control costs can quickly turn data management and administration into a real headache.

The Archiware P5 software suite is ideal for all companies in the media and/or entertainment sector, regardless of their size. The four modules of the Archiware P5 suite allow you to administer and secure your data with ease, based on three pillars: archiving, backup, and cloning.

The four modules that make up Archiware P5 can be combined to create multi-step security procedures for maximum data protection. Archiware P5 secures data on disks, tapes, and in the cloud, and integrates seamlessly with BA Instruments' XSTREAMSTORE servers.

MODULES OF THE ARCHIWARE P5 SUITE

P5 Archive

Data Migration to Offline Disks

P5 Synchronize

Data Replication/Cloning to Ensure High Availability

P5 Backup

Backup of server data to disks, tapes, or cloud

P5 Backup2Go

Backup of data from laptops or desktop workstations to disks, tapes, or cloud
