

Cinegy Workflow is a modular and open platform consisting of a suite of tools, applications, and open APIs that covers every stage of television production.

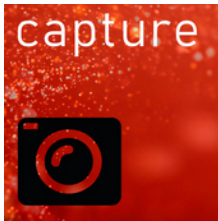

Cinegy Workflow is an integrated, end-to-end digital media production and management system for SD/HD/4K. It was developed to address the new challenges of 21st-century television and media production. Based on standard IT infrastructure and hardware, Cinegy Workflow is a modular and open platform composed of a suite of tools, applications, and open APIs. This enables television production to transition to next-generation equipment without becoming locked into proprietary hardware. Cinegy Workflow also integrates seamlessly into traditional production and post-production chains, including non-linear editing systems. It can be fully implemented without requiring investment in new infrastructure.

FLEXIBLE AND SCALABLE

Cinegy Workflow encompasses all aspects of media production, including real-time media ingest at multiple quality levels, shot detection, speech recognition, advanced recording, production notes, voice annotation, rights management, digital asset management, search and retrieval, sequencing, storyboarding, non-linear editing, collaborative group work, remote viewing, review and approval, playback, and conforming. Cinegy Workflow also handles multimedia outputs for the web, DVDs, and Blu-Ray.

THE CINEGY SMART PRODUCTION SUITE UNIVERSE

CINEGY CAPTURE PRO

Allows operators to work with a comprehensive client interface, launchable from anywhere on the network, which controls a dedicated ingest service. It simultaneously generates a high-quality codec and a proxy (including DNxHD/DNxHR). The gang record function enables recording an unlimited number of synchronous channels with frame accuracy.

CINEGY CONVERT

Centralizes rendering and automates encoding, even for the most complex professional file formats. Convert frees up resources and time for operators, allowing them to focus on ingest and/or broadcasting.

CINEGY ARCHIVE

The most secure core for controlling and sharing your active media and its metadata, through centralized access for professional content management. Cinegy Archive is the centerpiece of your management system.

CINEGY DESKTOP

The most versatile interface for the treasures stored in Cinegy Archive, offering seamless collaboration for hundreds of simultaneous clients. Desktop enables editing during ingest and broadcasting your newly created subclips without consolidation.

CINEGY AIR PRO

The ultimate solution for live and/or delayed broadcasting. Cinegy Air features playlist creation/management tools (support for secondary events, multi-channel management interface, precise live event handling, easy integration with traffic systems, etc.), can manage multiple dynamic graphic layers, and enables multi-destination broadcasting through a single channel.

CINEGY TITLE

Allows creation or import of template-based titles, logos, animated graphics, and automation templates. Manages "coming next" segments, news flashes, thumbnail overlays, and more.

CINEGY MULTIVIEWER

Displays signals for analysis and alert monitoring—it is the barometer of capture. Running as a service on a standard computer, video streams can be received via IP (e.g., Ethernet) or using a standard SDI card.
